

Basile Vanhaverbeke

 Front-end developer / Web designer

 5y. of experience

 Brabant Wallon / Bruxelles

 <https://basile-vanhaverbeke.be>

I've been working as a frontend developer for 5 years, both in a creative web agency (La Niche) and within a large company (Proximus). Naturally curious, I'm always eager to explore new ways of working and to improve my skills. Passionate about user experience, I enjoy collaborating through design and development to craft solutions that serve the end user as best as possible.

Source / Front-end consultant

oct. 2025 - dec. 2025 · 3 months

Context

Source is a geospatial intelligence company operating flights over customer territories (pipelines, power lines, etc.) to capture aerial photography and detect specific issues based on client needs.

I worked as a freelance on a B2B SaaS platform to streamline this entire aerial surveillance workflow on a single platform, enabling stakeholders to manage campaigns, coordinate missions, track flights, and perform post-flight analysis.

I developed the enterprise design system under technical supervision and actively participated in the main application frontend within a team of 5 developers.

Responsabilities :

Design system : Created reusable tested components using Storybook 9 & Vitest, configured Tailwind with theming (light/dark/rainbow), and assisted in Rollup bundler setup & GitHub Packages distribution.

UI integration : Integrated design system components throughout the saas application, collaborated with designer on Figma-based UX improvements, implemented Framer Motion animations.

Features : Developed resizable panel architecture with Context API and collision detection, contributed to centralized routing configuration with role-based access control, implemented form workflows with internationalization (EN/FR).

Environment :

AGILE : Project owner, tasks list, weekly briefings

Stack : React / Typescript / Tailwind / Rollup / Vite / Tanstack / Framer Motion, TanStack Query & Router / Docker

Tools : GitHub / Vs code / Copilot / Claude / Figma / Odoo

Experiences in details

CBTW

CBTW / Front-end consultant

oct. 2020 - feb. 2025 · 4 years 4 months

Context

I joined the internal web team at CBTW, which was responsible for delivering websites to clients. Shortly after joining, my business manager assigned me to a long-term mission at Proximus that lasted 2.5 years.

In 2023, I took the opportunity to work independently as a freelance web designer in Martinique. I contributed to several small projects, both for local clients and for remote collaborators in Belgium.

I returned to CBTW in November 2024 and rejoined the internal web team for a 3-month period. As no new projects were available for consultants at that time, my collaboration ended in January 2025.

Responsibilities :

Web team : Designed wireframes in Figma, integrated pages, maintained and fixed bugs on WordPress websites, and handled day-to-day development tasks.

Team building workshop : Having been part of the team for a long time, I was invited to lead a team-building workshop to help consultants connect during their time "on the bench." It was a rewarding experience as a facilitator.

SharePoint : Following a UX/UI analysis, I was assigned to revamp the internal SharePoint system.

Environment :

AGILE : Daily standup, scrum master, project owner, sprints, stories, sprint planning, man days, weekly demo, etc.

Stack : Twig / SCSS

Tools : GitLab / Vs code / Figma / Jira / Sharepoint

Experiences in details

Proximus / Front-end (CBTW mission)

oct. 2020 - mar. 2023 · 2 years 6 months

Context

I was hired to work for Proximus in the Pickx project in order to do daily maintenance, creation of a design system (DS) and migration of an old infrastructure to a new one.

Responsabilities :

Day to day : Fixing bugs, pages updates, design changes.

Articles revamp : After an UX/UI analysis, it was foreseen to revamp all the article pages. I was in charge of the integration of the new components and pages. I also had to revamp other elements of the website.

Design system : The pickx website was a separate project in the Proximus ecosystem. They were not using the main design system and they decided to create their own one. I helped the team in this matter. I first had to clean the old HTML/CSS in order to then use the new design system without conflicts. I created afterwards several components in the DS using React, Typescript and Storybook.

Festivals : We created a standalone website related to partner festivals using next js. The users could see the live concerts and watch related content, articles and vods.

Environment :

AGILE : Daily standup, scrum master, project owner, sprints, stories, sprint planning, man days, weekly demo, etc.

Stack : Twig / SCSS / React / Typescript / SSL Server / Next js / lerna / storybook

Tools : Jira / Confluence / GitLab / Vs code / Adobe XD / Figma

Experiences in details

La niche / Junior front-end

jan. 2020 - aug. 2020 · 8 months

Context

After graduating I was hired as a junior frontend developer. I worked on many projects and collaborated actively with the team. We had many clients from various sectors, from former Lampiris to AB Inbev.

Responsibilities :

Day to day : Fixing bugs, pages updates, change requests, etc.

Design integrations : The designers provided figma files to integrate for our clients. I was in a team of 5 developers (2 backend, 2 frontend & 1 fullstack) and we worked closely together alongside the designers. I was for instance given the task to integrate the new design for the company's website.

React app : We developed a React web app to support firefighters in the field.

Environment :

AGILE : Daily standup, scrum master, project owner, sprints, stories, sprint planning, man days, weekly demo, etc.

Stack : Wordpress (twig) / Emulsion (custom CMS) / SCSS / React

Tools : Jira / Git / Vs code / Figma

Experiences in details

Emakina / Front-end (internship)

jan. 2019 - apr. 2019 · 4 months

Context

I joined them for my third year internship in multimedia writing at ISFSC. I was able to work autonomously on a big budget project by collaborating as equals with the other members of the team.

Responsabilities :

React games : In a team of 3 developers, we developed three promotionnal games : a counter, a memory and a "find in the picture".

Wireframes creation : I was sometimes asked to provide assets and wireframes using adobe XD and photoshop.

Environment :

AGILE : Daily standup, scrum master, project owner, sprints, stories, sprint planning, man days, weekly demo, etc.

Stack : Yarn / React / Framer Motion

Tools : Jira / Git / sourcetree / Vs code / Adobe XD & Illustrator
